

DSH DuckDuckGo Web Search

DuckDuckGo-backed `web_search` provider for DeepSeek Harness. No API key.

Published on npm: [dsh-web-search-duckduckgo](https://www.npmjs.com/package/dsh-web-search-duckduckgo)

Install

```
dsh plugin --profile web add dsh-web-search-duckduckgo@latest
```

Restart:

```
dsh web
```

Then ask the agent to search the web as usual.

This plugin has no native build scripts, so you do **not** need `pnpm approve-builds` (that step is only for packages like `dsh-better-sidebar` that ship `node-pty`).

Install (from a local checkout)

1. Open a terminal in this folder (`web-search-duckduckgo`).
2. Run:

```
dsh plugin --profile web add .
```

3. Restart with `dsh web` .

Remove

```
dsh plugin --profile web remove dsh-web-search-duckduckgo
```

Release (maintainers)

Bump `version` in `package.json` , then from this folder:

```
npm publish --access public
```

Repo: [tadreamk/web-search-duckduckgo](https://github.com/tadreamk/web-search-duckduckgo)

Config

Field	Default	Meaning
baseURL	<code>https://html.duckduckgo.com</code>	HTML search origin; <code>/html/</code> is appended

Notes

- Uses DuckDuckGo's public HTML results page (not Instant Answer).

- No API key or Settings credential is required.
